

CloudSuite Payment Methods Guide

This guide explains every supported payment method, how to add or remove a payment method, and how to resolve the most common payment errors.

Supported Payment Methods

Method	Available On	Processing Time
Credit / Debit Card (Visa, Mastercard, Amex)	All Plans	Instant
PayPal	Starter, Pro	Instant
ACH Bank Transfer	Enterprise only	2-3 business days
Wire Transfer	Enterprise only (invoiced)	3-5 business days

Adding a Payment Method

- 1 Go to Billing > Payment Methods > Add Payment Method.
- 2 Select the payment type and enter the required details.
- 3 For cards, CloudSuite runs a \$0 authorization check to confirm validity before saving; this does not appear as a charge.
- 4 Set the new method as default if you want future charges to use it automatically.

Removing a Payment Method

You cannot remove the only payment method on file while a subscription is active. Add a new method and set it as default first, then the old method can be deleted from Billing > Payment Methods.

Common Payment Errors

Error	Likely Cause	Resolution
Card Declined	Insufficient funds, bank fraud block, or expired card	Contact your bank, or add a new card
Payment Method Invalid	Card number or CVV entered incorrectly	Re-enter details carefully; check for typos
3D Secure Verification Failed	Bank-required extra authentication step not completed	Retry and complete the bank's verification prompt fully
ACH Payment Returned	Insufficient funds or incorrect routing/account number	Verify bank details and retry; repeated returns may suspend

Currency and International Payments

CloudSuite charges in USD by default. Customers in the EU and UK can opt into billing in EUR or GBP respectively under Billing > Currency Settings; switching currency takes effect starting with the next

billing cycle and does not affect past invoices.

When to Escalate a Payment Issue

- The customer disputes a charge as fraudulent or unrecognized.
- A payment error persists after trying a different card and a different browser.
- The customer requests a refund outside the standard 14-day policy window.
- An ACH or wire transfer has been pending for longer than the stated processing time.
